What makes Nutracoat chews so unique

High strength, high quality

Nutracoat chews contain only the highest quality natural ingredients and provide a natural alternative for supporting skin and coat maintenance.

Highly palatable

The hydrolysed chicken liver flavouring included provides a tasty and easy to administer treat that pets love, making administration and compliance much easier.

Omega-3s

Omega-3 fatty acids from high purity, refined fish oils play a crucial role in supporting the skin and coat health of dogs. Studies have shown that EPA and DHA from fish oil provide support for the coat condition, whilst supporting the body's own natural anti-inflammatory processes to soothe skin irritation, and reduce licking and scratching.

Probiotic

Bacillus velezensis is a live probiotic, not only important for gut function but studies have also found it to be a viable natural alternative to traditional solutions for itchy dogs, additionally improving coat condition resulting in a brighter and shinier coat.

Pre & postbiotics

Hydrolysed yeast, derived from *Saccharomyces cerevisiae*, promotes healthy skin in dogs through several mechanisms. It is rich in essential nutrients, particularly B vitamins, which improve skin health and coat appearance. By supporting a balanced gut microbiome, it enhances digestion and nutrient absorption, crucial for skin resilience. Its anti-inflammatory properties help reduce skin irritation and redness, while its ability to modulate the immune system boosts the body's response to skin issues like allergies.

Biotin

Biotin is an important water-soluble B vitamin, and is essential for connective tissue growth and to maintain the integrity of skin and coat. Hair loss is a classic sign of a biotin deficiency and studies using the levels in Nutracoat chews have been shown to aid the skin and coat leading to a reduction in dry, flaky skin, brittle coat and nails.

Vitamin E

Vitamin E is a powerful antioxidant helping protect the body against damage causing free radicals. Regular supplementation helps to reduce itching and scratching, commonly found in hot spots. It can also help promote hair growth making the coat thicker and shinier.

Ingredients

	(Per 3g chew)
<i>Bacillus velezensis</i>	500 million CFU
Omega-3	171 mg
EPA	84 mg
DHA	57 mg
Vitamin E	10 mg / 5 IU
